# CONSISTENTLY BETTER – FLUSHING TECHNOLOGY UPGRADE 2021

The universal cistern for  
TECEprofil and TECEbox.

**NEW**

## KEEPING EVERYTHING SIMPLE!

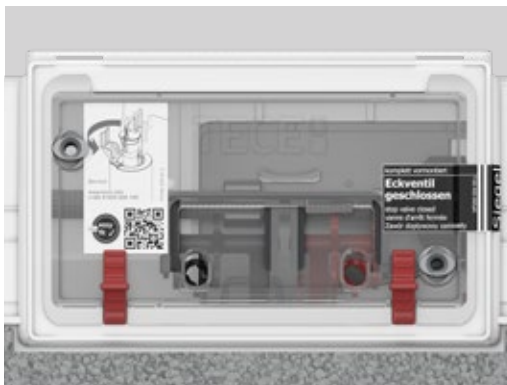

Regular upgrades ensure that TECE flushing technology is constantly improving - and yet everything stays simple. Maintaining the tried and tested, while implementing feedback from the market into improved functions and solutions – that is what we call close to you.

“A cistern should be installed in the shell and in fine installation in a few simple steps, without reworking. Without having to assemble it on the construction site.”

### Proven technology – even better in handling

Out of the box, onto the wall: flushing technology from TECE is that simple. Tried and tested properties and new details help make handling even more reliable. No errors, no readjustment – discover the TECE universal cistern with the handling upgrade.

**Proven reliability:** the TECE Uni cistern comes pre-assembled and sealed ex works. It only needs to be connected to the pipes during the shell installation phase. You only have to open it during fine installation – and construction debris remains safely out of the box.

**Another improvement:** installing the flush plate is now even easier – thanks to easy fit for quick installation. Each TECE flush plate can be installed in next to no time without measuring or setting. As before: all TECE flush plates are compatible with the universal cistern from TECE – at any time and in any installation situation. We guarantee the combination of “new” and “old” components without easy fit.

### Upgrade

- easy fit tool-free quick assembly for flush plates
- Installation tunnel with “zip” function: shorten without tools
- Quick adapter for water connection: no sealing, no errors
- Conduit for universal connection of shower toilets

### Reliably proven

- Can be combined with all TECE flush plates
- Sealed tank doesn't have to be opened in shell construction
- 10 litre safety tank – for immediate additional flushing (without waiting)
- Universal cistern for all applications and toilet ceramics
- Tested in accordance with DIN EN 14055

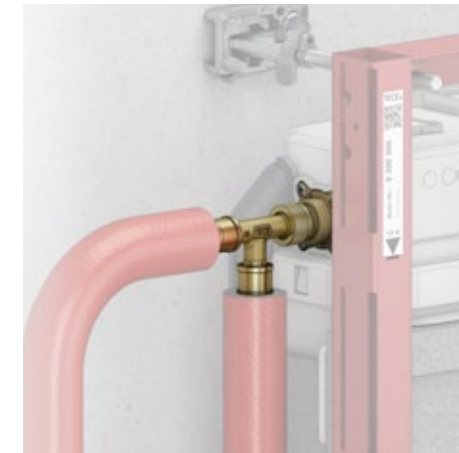

# AT A GLANCE: THE INSTALLATION UPGRADE FOR THE UNI CISTERN

With all its usual outstanding features, the tried-and-tested all-rounder now works even better during installation – thanks to clever upgrades that make installation easy. No ifs or buts.

## Removed with a "zip"

No sharp knife, no sharp breaking edge: with the new Uni cistern, the polystyrene bare-wall protection sits in an installation tunnel with a "zip" function. The wall is plastered and tiled up to the installation tunnel. Afterwards, the bare-wall protection is simply removed. The installation tunnel can simply be pulled off at the required depth with a "zip". Dangerous freehand cuts when shortening with a cutter knife are unnecessary here.

## Quickly connected – without sealing

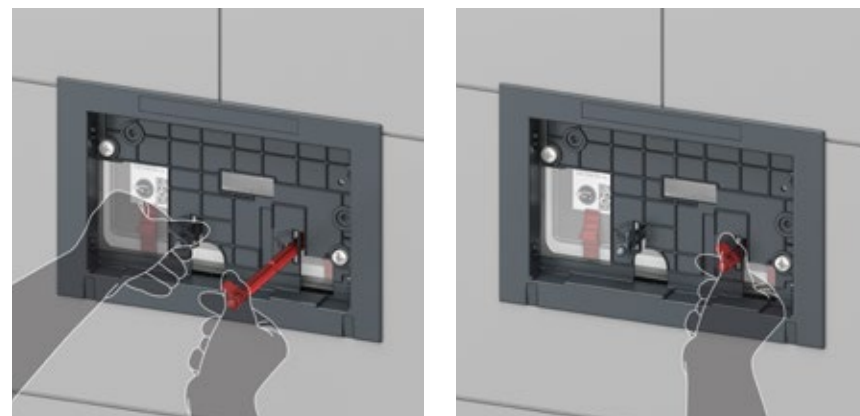

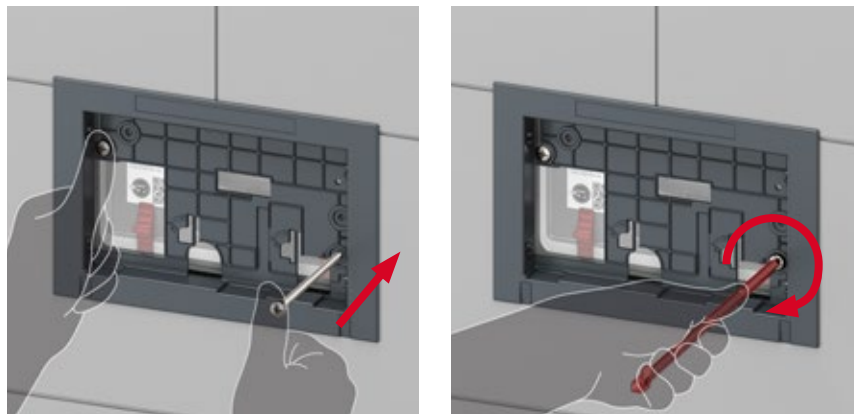

The new water connection of the cistern has a 1/2" external thread and is compatible with quick adapters. Time-consuming sealing? Not any more.

## Fit for the future

Electronic shower toilets can easily be retrofitted in the new standard TECEprofil toilet module. The reinforced hose for the shower function is safely guided into the cistern via a conduit. A junction box is integrated in the toilet connection box to supply power to electronic flush plates or shower toilets. Of course, the TECEprofil toilet module can still be equipped with the upgrade set for the TECEone powerless shower toilet, which can be ordered separately.

Discover the new TECE Uni cistern:  
in our new function video  
[www.tece.com](http://www.tece.com) or in the TECE YouTube channel.

### Flush plate assembly – faster than ever!

Get there quicker: with easy fit, the flush plate can be installed in one go. No need for readjusting or measuring. Insert the screws, push them through and tighten them with just a few turns – the attachment frame is already firmly fixed on the splash guard. Now simply insert the actuation rods and fix them in place with a 45 degree turn. This not only saves nerves, but also around two thirds of the time!

### Bare-wall protection at its best

In addition to the flush and waste water connections, the new bare-wall protection also keeps the connection area for electricity and shower toilet free and is easy to tile with just a few straight cuts. The threaded rods for the fine installation are housed in the polystyrene bare-wall protection: safe, ready to hand and protected from dirt until they are required.

## “All the plates fit. Every time!”

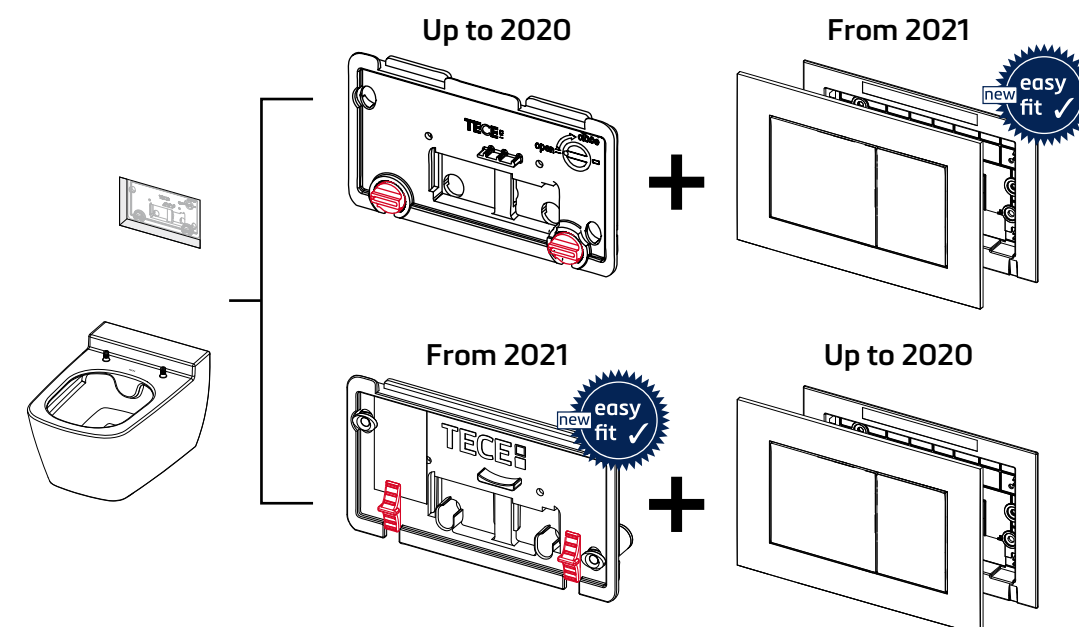

“In 2021, we will be adding a whole range of upgrades to our flushing technology. Many of these have come from your suggestions or from conversations with you. Time to say thank you! And as ever, the same applies to this upgrade: full compatibility throughout the whole range, regardless of age.”

Andre Meiermann, Product Manager Sanitary Systems

### Universally compatible!

All TECE flush plates are compatible with the universal cistern from TECE - whatever the series, whatever the year! We also guarantee this for cisterns and flush plates with and without easy fit.

### Combinations with and without easy fit. Making assembly a success!

Installation with and without:  
That's how it's done! Find out
